CAUTION

- Be very careful of the element connections as they can be bent or broken by mishandling. **HOLD TERMINAL WITH PLIERS** while tightening screws.
- This high quality boil tank is made from CAST ALUMINUM! To prevent thread-stripping start all screws by hand and **do not over tighten**.
- Do not reuse the screws from any old tank. We supply 4 each new 1/2" X 10-24 SS screws and 3 each 5/8" X 10-24 SS screws (USE the 5/8" screws for the cover) **NOTE: old Lucks/Hobart tanks use 10-32 ... you will damage the new tank if you use them!**
- Seal the wiring cover to the tank with high temperature silicone sealant. The BTP cover and BTP boil tanks are designed to seal without additional sealant. A NEW cover to OLD Lucks boil tanks WILL require additional sealants.
- This TANK wires up in a WYE (BOTH 208 and 480 volts) configuration instead of the Hobart/Lucks DELTA. See sketch below for details.
